

Holtec and Lacey Township Reach Amicable Agreement to Continue Prompt Decommissioning of Oyster Creek

Holtec International has reached a positive agreement with Lacey Township regarding the prompt decommissioning of the former Oyster Creek Nuclear Generating Station. The agreement allows Holtec to proceed with safely moving the station's remaining spent nuclear fuel from the plant's spent fuel pool into dry cask storage on the onsite Independent Spent Fuel Storage Installation (ISFSI). The two parties have agreed to adopt enhanced communication measures to prevent future misconceptions that had strained our relations with the township to address the

s of the local community . The agreement seeks

vessel internals ahead of schedule; dismantled and removed transformers; and completed dozens of other activities with no safety incidents.
