

Capabilities and Core Competencies

Holtec International is a global turnkey supplier of equipment and services for the nuclear industry worldwide. The Company is an innovator and industry leader with a dominant market position around the globe. Among the Company's pioneering achievements is the development of the Advanced Fuel Cycle Facility for nuclear fuel being developed in the United States, SMR-160. The SMR-160 is developed to bring the benefits of nuclear power to a wider range of markets. Holtec is also a major supplier of special-purpose equipment, such as air-cooled condensers, steam generators, and other nuclear components. Products produced by the Company are built in the United States. Nearly 100 U.S. and international patents protect the Company's intellectual property and lend predictable stability to its business.

Nuclear Fuel and HLW Management

- Storage and transport systems
- Wet nuclear fuel storage systems
- Innovative approaches to improve safety, reduce cost and risk
- Dry storage services include civil/architectural design, site construction, supply of systems and full loading campaign
- Wet storage services, including rack installation

Engineering and Consulting Services

- Engineering change packages
- Design and product development
- License support (e.g., design, construction, operation, maintenance, decommissioning)
- Fluid management
